PROJECTS

1.Login ,signup & logout page (web application-Ongoing)

- Created a platform where user can register and then login using those credentials. Whenever users register themselves their information and credentials are stored in sql database. Frontend is built using html, css which is connected to sql server using jsp and jdbc.

2.Masters in Abroad (core java)

- This is backend project based on core java concepts. In which user can check various masters courses available in abroad by giving user input.

https://github.com/codewitharman/Masters_in_Abroad.git

3.Apple landing page website clone (html,css)

- Frontend concepts like Html and CSS used in this project.

https://github.com/codewitharman/Apple_Website_Frontpage.git

4.Prototype Of Automated Coconut Scrapping Machine (solidworks)

- Objective is to design an automated scraper that will reduce time and effort, and be more safe and efficient when compared to the manual and semi-automatic scrapers.
