EDUCATION

Data Analytics Certification

Masai School, Bangaluru
May-22 - Jan-22

BCA

ICFAI University, Raipur
2019 - 2022

TECHNICAL SKILLS

- MS SQL
- Python
- Pandas
- Numpy
- Matplotlib
- Seaborn
- MS Excel
- Tableau

SOFT SKILLS

- Leadership
- Effective Communication
- Time Management
- Team work

INTERESTS

- Singing
- Listening Songs

WORK EXPERIENCE

Woodiewin Technology Pvt Ltd | Raipur (1 yr 2 months)

Recruiter

Nov 2021 - May 2022

In my role as a recruiter, I was responsible for understanding the company's requirements when hiring candidates through LinkedIn, Internshala, and Naukari. My primary goal was to select the best candidates through a phone screening and then face-to-face interviews. Send offer letters to new hires as soon as they are hired, addressing their compensation and benefits queries

Through this experience, I learned how to solve problems and communicate effectively.

Technical Support

Mar 2021 - Oct 2021

As a technical support employee, I learned how the admin panel supports the entire application. It sharpened my analytical skills and allowed me to analyze the growth and daily involvement of users on the application.

PROJECTS

Financial Analysis of different States

The purpose of this project is to describe how a state in India is growing financially. The dataset contains data from 2005 to 2022. Using SQL, we grouped the data in terms of 5 years and then used Excel to create connections between SQL and Excel. As a result of analyzing the data and getting insights, I developed various charts through pivot tables and attached slicers to them. Finally, all the data were aligned onto one sheet so a dashboard could be created that could be viewed and understood in an interactive fashion.

Techstack- SQL, Excel

Case Study Analysis on PharmEasy

This project was to analyze the current market growth of Pharmeasy and how is the sustainability of such a business possible. For describing these facts we used different case study frameworks and models.

HR ANALYTICS Dashboard In Tableau

This project is an analysis of how employees are quitting their jobs from different departments of the company. What is the current attrition rate from different age groups and on basis of gender as well? Developed KPIs and charts for a better-visualized understanding of the problem statement. Parameters are mapped with the entire sheet for making it dynamic and used some filters as well. The project landed successfully and anyone can easily get the understanding by visualising the dashboard itself.

Techstack- Tableau

ACHIEVMENTS

- SQL Certificate from Hackerrank (Basic)
- Google Analytics Certification (Beginners)
